

## Deliverable C1-5

### Study of jobs creation and growth

The Europe 2020 strategy strongly advises that the new EU funded projects should promote both innovative technological solutions to be readily adopted by the market and creating new job opportunities for the EU citizens. Jobs that will be either full-time or part-time and will be a great opportunity for people to gain experience on brand new technological methodologies, state of the art equipment and be part of the next era manufacturing process and way of business.

The LIFE DIANA project, sharing the consensus of the EU LIFE project management team, does not solely aim at developing an innovative methodology to tackle with the problem of oil sludge deriving from the oil refinery processing. Hand to hand with the valorization of the oily sludge, the LIFE DIANA gives the opportunity for a business growth, by employing personnel to join forces in this new technological endeavour. Technical skilled personnel, technical leaders and researchers are some of the vacancies associated with the emerging new processing method of the refinery's sludge.
